

DIMENXION[®] conference V3

ONLINE MEETING PLANNER
 WEB-BASED SOLUTION
 FOR HOTELS AND CONFERENCE CENTERS

DIMENXION® conference V3 – THE ONLINE MEETING PLANNER

DIMENXION conference is an online meeting planner application that uses an intuitive, interactive interface to promote conference and event facilities of your property. Based on state of the art technology it not only ensures the fast loading of both the initial 3D view and the subsequent 2D detail modus, it also enables scaling, flexible seating manipulation and crisp PDF generation.

Once users have selected a room of interest via the interactive animation, they are afforded all the information they need to make decisions based on attributes such as windows, dividing walls, fixed furniture, equipment, features, lighting, size and last but not least seating options. Those that prefer to find suitable rooms based on particular criteria such as size or capacities can do so by selecting the appropriate parameter from within the search function. The application also provides an area to promote current offers and conference packages with the objective to finally generate a request for proposal (RFP).

DIMENXION® conference is an ASP solution (application service provider) using cloud computing technology. That means that the application – including its backend content management system - runs on a high performing server and requires no own installation and

IT intervention. The front-end user interface also requires no installation on the part of the client which allows the interaction by just using a common browser.

Not only is DIMENXION® conference a cost effective means of generating client interest, it also frees up valuable human resources. Clients getting into contact through the application are well informed and ready to discuss details. Event department employees often only have to take the booking.

NEW FEATURE – THE ONLINE ROOM PLANNER

DIMENXION conference's V3 is the application's latest version and as such, affords both users and event departments a number of important features. One of these is the 'Online Room Planner'. This module provides an intuitive password protected interface through which seating configurations and other room planning can be implemented by the client directly. These plans can then form the basis for consultation where necessary or room preparation once approved. download. In addition, your clients can email their abstracts to you for final confirmation.

ADVANTAGES FOR FACILITY PROVIDERS AT A GLANCE:

- * State-of-the-art meeting and banqueting facility presentation in 3D and 2D
- * Cloud computing philosophy, no software download required
